

Circle Edge 2025

Round One: Concept Generation

Concept Generation is the primary focus of Round One, held on January 31st. This round is essential for teams to brainstorm, define, and refine a unique concept addressing a specific societal, environmental, or economic issue with a clear, impactful solution.

Key Focus Areas

1. Concept Generation:

Teams will begin by defining a problem they aim to solve. The objective is to come up with innovative and impactful solutions. The process involves:

- Problem Definition: Clearly state the problem or need in society, the environment, or the economy. It must be relevant and have a scope that teams can address within the competition.
- Idea Generation: Brainstorm possible solutions to the identified problem. Teams should be creative, thinking outside the box, and exploring various alternatives.
- Evaluation and Screening: Narrow down ideas to a feasible and impactful solution. Evaluate each idea based on its viability, market potential, and alignment with the team's capabilities.

2. Business Proposition:

This section requires teams to connect their concept to a viable business strategy. They will develop a basic business proposition that addresses:

- Target Audience: Identify the people or group who will benefit from the solution. Teams should analyze their target audience's needs, preferences, and pain points.
- Problem or Need: Clarify the problem being addressed and why it matters to the target audience.
- Solution or Offer: Describe the proposed solution and its value to the target audience. This is the team's unique offer to the market.
- Unique Selling Point (USP): Identify what makes their solution different or better than existing alternatives.
- Benefits and Value: Outline the main benefits the solution provides. Teams should explain how the solution will improve lives or businesses, adding value for the target audience.

- Call to Action: Define the next steps for moving the concept forward, encouraging stakeholders to take action, invest, or collaborate.
- 3. Social Impact:
In this segment, teams should analyze the broader effects of their solution:
 - Economic Impact: Explain how the solution will affect the economy—job creation, cost savings, revenue generation, etc.
 - Environmental Impact: Consider how the solution might contribute to sustainability. Does it help reduce waste, conserve resources, or protect ecosystems?
 - Health Impact: If applicable, discuss any potential health benefits or risks.
 - Educational Impact: Consider how the solution may improve learning or awareness, especially in underserved communities.
 - Community Development: Explore how the idea could contribute to social change, community empowerment, or improving the quality of life.

Outcomes

1. Idea Refinement:
Teams will refine their concepts, ensuring they have a strong, clear, and well-defined problem statement and solution. Feedback will be provided to help teams further develop their ideas for the next rounds.
2. Feedback and Improvement:
Judges will provide feedback on each team's presentation, offering suggestions on how to enhance the clarity, feasibility, and impact of the concept. This feedback will help shape the teams' direction moving forward.
3. No Eliminations:
There will be no eliminations after Round One. All teams will move to Round Two, where they will have the opportunity to refine their ideas and develop a more detailed plan.

Deliverables

- 15 minutes Presentation.
- Proof of documents about
 - Problem Statement: Clearly define the problem you are solving.
 - Idea Proposal: Present your solution, ensuring it's innovative and feasible.
 - Business Proposition: Detail the target audience, solution offer, USP, benefits, and call to action.
 - Social Impact for one or more: Address the economic, environmental, health, educational, and community impacts of your solution.

Marking Criteria for Round One (Total: 100 Points)

1. Concept Quality (25 Points): Originality, creativity, and relevance of the proposed solution.
2. Problem Definition (20 Points): Clear articulation of the problem and its significance.
3. Business Proposition (30 Points): Quality of the business plan, including target audience, value proposition, and USP.
4. Social Impact (25 Points): Thoroughness and depth of analysis of the social, economic, and environmental impacts.
